

Corrigendum 1 - Response to the queries raised in pre-bid meeting for " Design Supply Installation Testing Commissioning of Musical fountain & High Jet Floating fountain with Mist at gullaua tal & globe fountain supplemented by water domes at chhoti line phatak, Jabalpur "

Sr.No.	Clause Ref. (Page/Para)	Query	Response and Clarifications	Revised Clause in RFP
1	As per RFP Mega fountain	<p>Since the water body is not deep enough and base of pond is made of natural mud, floating musical fountain will not work properly due to improper quality of water. We need potable water for fountain. Due to the shallow water body mud and other solid waste will come inside fountain fixtures through motor. The water in the fountain will get dirty. Therefore for a perfectly working floating musical fountain with clean and potable quality water .We can construct a small water body with in pond which can be filled with boring water. Since depth is very less so before musical fountain water filter is not advisable.</p>	<p>This is turnkey project you have to do the work as to complete the desire work along with 5 year O&M. Plan accordingly . No other additional payment made by JSCL to bidder</p>	No change
2	As per RFP Mega fountain	<p>Due to the shallow water body the floating high jet fountains cannot be installed on the corners of pond instead of these floating high jet fountains , static fountains on concrete platforms can be installed .This way they will look good and perform better . Operation and maintenance of these fountains would be easy and long lasting.</p>	<p>This is turnkey project you have to do the work as to complete the desire work along with 5 year O&M. Plan accordingly</p>	No change
